12. Search feature will allow you to enter a partial name and then the asterisk (*) to locate a child. This is faster than scrolling. If you know the child's, you can also enter the last, first to get to that specific child.

For example, above you will see Walk*, which will bring up any child that has those four characters in their name. I'm specifically looking for Mark Walker.

13. As you can see below, other names were returned because I did a "wildcard" search using the asterisk (*) after Walk:
